SUMMARY

Dynamic **Full-Stack Developer** and 2nd-year B.Tech CS student at AKGEC with expertise in the **MERN stack**. Proven track record in building secure, end-to-end web applications featuring complex **RBAC systems** and high-performance frontends. Focused on writing scalable server-side code and delivering high-fidelity user experiences.

SKILLS

Frontend: React.js, Next.js, Redux Toolkit, Tailwind CSS, HTML5, CSS3, JavaScript (ES6+)

Backend & Database: Node.js, Express.js, MongoDB (Mongoose), RESTful APIs, JWT Auth, Clerk

Tools & Cloud: Git, GitHub, Vercel, Postman, Render, Cloudinary, Firebase Authentication

Core Competencies: Data Structures & Algorithms (DSA), System Design, Unit Testing, Agile

EXPERIENCE

MLCOE (Machine Learning Center of Excellence)

Sep 2025 – Present

Full-Stack Developer

Ghaziabad, India

- **Engineered** and maintained backend logic and frontend interfaces for 3+ society projects, ensuring 99.9% uptime for registration portals during high-traffic events.
- **Developed** secure RESTful APIs to handle user authentication and data persistence, reducing server response times by **20%** through query optimization and indexing.
- **Architected** reusable UI component libraries using Tailwind CSS, streamlining the design-to-production workflow and reducing redundant code by **25%**.
- **Integrated** third-party services like Cloudinary for asset management and SendGrid for automated communications.
- **Mentored** junior developers on MERN stack best practices, maintaining 100% code quality standards.

PROJECTS

TalentLoop – Full-Stack Recruitment Platform | *MERN, Redux Toolkit, JWT, Cloudinary*

- **Developed** a recruitment engine with **Role-Based Access Control (RBAC)**, enabling distinct dashboard workflows for recruiters (job management) and seekers (application tracking).
- **Implemented** secure JWT-based authentication with HTTP-only cookies, protecting sensitive user data.
- **Integrated** Cloudinary API for efficient profile and document management, optimizing asset delivery speed.

Game Recommendation System | *React, Flask, Machine Learning*

- **Led** a 6-member team to deploy a personalized engine utilizing a **Flask-based ML backend** and a React frontend for real-time suggestions based on user preference vectors.
- **Optimized** model response times by refining the communication layer between Python and JS layers.

Velvet & Vines – E-commerce Store | *MERN Stack, Redux Toolkit, MongoDB*

- **Architected** scalable NoSQL schemas in MongoDB to handle complex product SKUs and historical order tracking.
- **Managed** complex global state for cart logic and product filtering using **Redux Toolkit**.

Trinity – Multi-Model AI Dashboard | *React.js, Tailwind CSS, OpenAI & Gemini API*

- **Built** a centralized platform to benchmark outputs from multiple LLMs simultaneously using **Asynchronous JavaScript** and high-tech "Mission Control" UI aesthetics.
- **Optimized** API handling logic which reduced data fetching latency by **30%**.

ACHIEVEMENTS

- **3rd Rank** out of 700+ participants in the **VisionX Hackathon**; engineered the frontend for **OrbionX**, an AI intelligence system for real-time satellite tracking and collision prediction.

EDUCATION

Ajay Kumar Garg Engineering College (AKGEC), Ghaziabad

Expected May 2028

Bachelor of Technology (B.Tech) in Computer Science

CGPA: 7.8/10.0
